

Laminate Worktops

Care & Maintenance:

Every worktop is sealed along the front edge and underside. However please follow a couple of simple rules to prevent excess moisture causing potential damage to the worksurface and adjacent units. First make sure any appliance door seals are intact to prevent steam escaping in use. Secondly don't open your dishwasher until it has cooled down. this prevents steam escaping and condensing on the adjacent units and worksurface. a baffle plate should always be installed above a dishwasher to protect the worksurface from heat and steam.

Cut-outs for appliances & sinks:

Cut-outs should have a minimum 10mm radius corner to prevent stress cracking. Laminate worktops are ideal for inset sinks but they are not suitable for forming drainer grooves or for use with Butler or Belfast sinks.
